

# MyoJett Nutraceuticals

42 Elm Street Suite 3, Kingston, MA 02364  
(781) 585-5566

## About MyoJett:

Many parents with boys diagnosed with Duchenne have turned to supplements. MyoJett was formed out of the concern that "not all supplements are created equal". Supplement products are unregulated and may be created by unscrupulous companies who are seeking monetary benefit. Parents and patients are using these supplements for the potential and often hopeful possibility of maintaining health when faced with life limiting disorders.

## What is a safe supplement?

Because the FDA does not regulate supplements, it is often difficult to know if they're safe. Often we hear stories about supplements laced with anabolic steroids or tainted with lead. At the same time, we hear incredible demand for any and all compounds that will enhance our children's health because the health of our children affected by Duchenne is compromised already.

## Testimonials from MyoJett customers:

"Speaking from the heart, it is vital that I feel that the supplements I give my son are safe and come from a reputable source. MyoJett convenience packs have given me a sense of relief" *Cindy Quitzau, Mansfield, MA*

"I'd much rather purchase vitamins from an organization with a vested interest in its quality like MyoJett" *Rich Romito, Denver, CO*

"MyoJett Convenience packs are ideal because the doses are already calculated, marked and you don't have to worry about the safety aspect." *Donna Doyle, Doylestown, PA*

## Why buy supplements from MyoJett Nutraceuticals?

1. MyoJett's Laboratory and Manufacturing partner has achieved unparalleled quality throughout more than 50 years in existence and is dedicated to unprecedented quality standards through every step of the manufacturing and quality control procedures.

- ✓ ISO 9001 and 17025- These standards certify the manufacturing process to ensure quality control. It's important to note that they do not certify or regulate the raw materials used to create supplements.

International  
Organization for  
Standardization

- ✓ cGMPs- Short for Current Good Manufacturing Practices, cGMPs are a set of guidelines that, according to the FDA provides for systems that assure proper design, monitoring, and control of manufacturing processes and facilities.
- ✓ Independent Testing- Independent labs currently perform testing on supplements commonly used by athletes. NSF is one of the largest independent labs in the world. They do end to end testing, certifying everything from the raw materials, to the process of manufacturing to the end product itself.

The Public Health and Safety Company.™

2. Proceeds from all MyoJett products will benefit Duchenne muscular disorder research through MyoJett's charity partners.

## MyoJett Nutraceutical Products

**AM/PM Convenience Pack** “Saves time, saves money – family safe products”. The MyoJett convenience pack is a cost effective and convenient 30 day supply of supplements that many parents purchase for their kids with muscular dystrophy, with similar areas of focus; Vitamin D, CoQ10, Calcium, Vitamin Bs and anti-inflammatory agents. For this reason, the convenience pack has been formulated to address these common areas. The convenience pack was designed for children over the age of 8 or weighing 65 lbs or more. It delivers Calcium, Magnesium, CoQ10, a broad spectrum of Vitamin B and two excellent sources of natural anti-inflammatory compounds; Tumeric and an algae based Omega 3 in two daily doses; an AM pack and a PM pack.\*

### **Additional MyoJett Products**

Other nutraceuticals (commonly used by parents whose children are affected by Duchenne) are sold individually\*:

- L-Arginine
- Protandim
- Juven
- visit us at [Jettfoundation.org/duchenne-resources/myojett-nutraceuticals](http://Jettfoundation.org/duchenne-resources/myojett-nutraceuticals) for a full list of products

### **AM/PM Pack Description:**

- **Stress-B-Plus High potency B complex vitamin.** As co-enzymes, the B vitamins are essential components in most major metabolic reactions. They play an important role in energy production, including the metabolism of lipids, carbohydrates, and proteins. B vitamins are also important for blood cells, hormones, and nervous system function. As water-soluble substances, B vitamins are not generally stored in the body in any appreciable amounts (with the exception of vitamin B-12). Therefore, the body needs an adequate supply of B vitamins on a daily basis. Thiamin, riboflavin, and niacin.\*
- **Cal/Mag 2001** provides a highly beneficial source of dietary calcium together with other nutrients that assist in the maintenance of healthy bone structure and function. \*
- **Citrus Solu Q** (Co-enzyme Q10) an important nutrient in supporting cellular energy naturally found in the human body, however, low levels are typically found in chronic conditions such as muscular dystrophy\*
- **Omega 3** Research shows that omega-3 fatty acids reduce inflammation and may help lower risk of chronic diseases such as heart disease, cancer, and arthritis. Omega-3 fatty acids are highly concentrated in the brain and appear to be important for cognitive (brain memory and performance) and behavioral function.\*
- **Tumeric MAX-V** Support proper ocular and gastrointestinal function. Studies have shown that curcumin, a naturally occurring biologically active group of compounds from turmeric, can function as efficient antioxidants and can help regulate the body's normal response to inflammatory processes. Turmeric's powerful antioxidant properties are also thought to play a role in supporting neurological and cardiovascular function.\*
